

You are cordially invited to participate in the next **UNOS Labs organ offer simulation study**, which is being conducted in concert with October's AST Virtual Fellows Symposium. Over 300 kidney surgeons and physicians have participated in one or more of our previous offer simulation studies; most participants have said they benefitted from and even enjoyed the experience.

We encourage all eligible attendees to participate as the results of this study will be shared and discussed during the Kidney breakout session of the Fellows Symposium

The actual study period will take place **during a 4-day period in September**. During this time, our DonorNet simulator - "SimUNet" - will send you one or more hypothetical kidney offers by email each day. Your task is to carefully review each offer and indicate whether you would accept the offer for the specific candidate in actual clinical practice. You will be able to respond to the offers either in real-time or at your convenience, including during the week following the study period.

Results from the study will be shared and discussed in October during the symposium, but your results will remain confidential and not be shared in an identifiable way with others. Each participant will also receive a custom participant response analysis.

To participate, **before September 1st**, you will need to:

1. Respond to the participant consent within the survey emailed to you after registering for the Fellows Symposium.
2. View the 5-minute participant orientation video:
<https://unos.wistia.com/medias/hgc5yavozy>

If you have not received the survey to participate after completing your registration for the Fellows Symposium, and would like to take part in this study, please email Charlotte Aguilar caguilar@myAST.org.

Thank you for participating!
